

Week of Aug 3-9 -- FALL BLOCK KICKOFF (Testing Week)

BR100 done. Now the pivot: fall = WEIGHT + HALF MARATHON. This week = run re-entry + threshold testing (bike ramp Wed, run 5K TT Sat) + the weight deficit RESUMES as the priority lever.

DAILY SCHEDULE

Day	Session
Mon Aug 3	DONE -- back + rehab (iso wrist hold 10 lb, plank, dead bug, bird dog).
Tue Aug 4	Easy run 2-3 mi, HR easy. First re-entry -- feel out the toe at soft effort.
Wed Aug 5	BIKE RAMP TEST (Zwift built-in). Warm up well. Sets your real FTP at last.
Thu Aug 6	Easy run 3 mi + 3-4 strides (toe-at-speed check) + optional upper strength.
Fri Aug 7	Rest or easy spin. Freshen the legs for Saturday.
Sat Aug 8	RUN 5K TT -- flat/measured or track, all-out even effort. (Slip to early next wk if toe unhappy Thu.)
Sun Aug 9	Easy 4-5 mi -- start rebuilding the long-run base.

WHY THIS WEEK -- CALIBRATE

Rested + fresh (form +20) off the recovery week, but **run-detained** (8 days off) and **cycling-primed**. So test the **bike first** (Wed); run the 5K **after 2 easy re-entry runs** (Sat) so the number is honest. This week sets the **calibrated numbers the whole fall block runs on** -- no more inferring zones.

FALL BLOCK FRAME

A-goal: **sub-2:00 half** (9:09/mi), a **mid-Oct-mid-Nov race -- LOCK ONE THIS WEEK**. Weight deficit LIVE again = the pace unlocker. Build: re-establish base -> **structured speed** (strides->200s/400s->fartlek) -> long-run progression -> tempo/threshold at **tested VDOT paces**. Bike = aerobic maintenance. Strength back to full next week.

THRESHOLD TESTS -- the point of the week

BIKE RAMP (Wed, Zwift built-in)

Warm up, then ride the ramp to failure. Gives an **FTP baseline** + apples-to-apples vs the old pre-coaching 217. A **20-min test ~2 wks later** to compare: ramp >> 20-min = punchy/anaerobic; close = steady diesel. **Paste the number after** and we set real power zones.

RUN 5K TT (Sat, flat/measured or track)

Warm up 10-15 min + a few strides. **Even all-out effort** -- resist a hot first km. Feeds **VDOT** = every training pace (Easy/Marathon/Threshold/Interval/Rep) + run LTHR + a **current half prediction** (day-one sub-2:00 gap). Re-test 6-8 wks.

NUTRITION (DEFICIT BACK ON) + REHAB

DEFICIT RESUMES ~300-400/day -- the fall lever.

Protein 150g/day -- whey scoop is the lever (beer/social days the recurring miss; matters more now for muscle retention in the deficit).

Weight watch: confirm Aug 3's 189.4 (camp bloat) settles to 185-186 within days.

REHAB (daily):

TKEs 3x15 each leg with band

Iso wrist hold left 10 lb x 30s (elbow holding at top of arc -- no flare)

Full strength returns next week; this week stays light to protect the two tests.

Fresh (form +20) | tests set real FTP + VDOT zones | deficit back on (fall lever) | LOCK a half mid-Oct-mid-Nov | Coach: Claude
