

Week of Jul 20-25 -- BR100 RACE WEEK

Arriving FRESH -- form +21. This week: stay sharp, don't go flat (no more building). BR100 Leg 8: 12.3 mi trail, +1,144 ft, ~2 AM Sat Jul 25 -- NIGHT run, adaptive timing.

DAILY SCHEDULE

Day	Session
Mon Jul 20	DONE -- core + rehab (iso wrist hold up to 10 lb).
Tue Jul 21	Easy 3 mi + 4 x 20s strides. Easy HR, quick feet. Primer, not a workout.
Wed Jul 22	Easy 2-3 mi OR short easy spin -- whatever feels good. + rehab.
Thu Jul 23	Rest + rehab. STAGE GEAR: charge headlamp, batteries, pre-mix fuel.
Fri Jul 24	2 mi shakeout + 2-3 strides, then done. BANK SLEEP tonight -- the one that matters.
Sat Jul 25	RACE. Leg 8 ~2 AM (adaptive). Fuel across day, nap/sleep per timing, warm up at exchange.

WHY SO LIGHT -- STAY SHARP

Form is already +21 -- maximally fresh. The risk now is going **FLAT, not tired**. Five days of pure rest = sluggish legs at 2 AM. So keep **light turnover** (strides, a few pickups) to stay primed. No volume, no intensity, no heavy lower. The work is banked.

RACE CONDITIONS (fcst Jul 20 -- check daily)

Night ~64°F, humidity 81%, wind light 5 mph. **COOL = your advantage** (heat's been the limiter all summer). 34% PM showers -> trail may be **damp/slick**. Moonset 2:14 AM = headlamp does all the work. **AIR: AQI 86 Moderate + Smoke Alert (PM2.5)** -- watch daily; if Unhealthy race night, back off. Fun relay -- lungs > time.

RACE NIGHT -- ADAPTIVE PROTOCOL (Leg 8, ~2 AM)

TIMING (adaptive -- do NOT fix on a clock):

Est. ~2:15 AM, real range 11 PM-4 AM. 7 runners / 88 mi ahead -- estimate errors compound. **Track the team's actual splits**. Steve (leg 7, ~11 PM, 14.4 mi) is your direct predictor -- once he's a few mi in, you know your window +/-30 min. Heat/smoke slowing earlier legs pushes you LATER = cooler + possibly cleaner air.

SLEEP (home -- own bed): Fri night = bank real sleep. Sat = sleep in + rest. Late start (3-5 AM): get a genuine sleep BLOCK first (down ~9-10 PM, wake off team progress). Early (~midnight): afternoon nap instead.

FUEL: normal meals + hydrate all day. Carb-based dinner a few hrs pre. Light easy carbs 1-1.5 hr before (NOT a big 1 AM meal). On course: **4.5 scoops Tailwind / 1.5L + SiS gels** (touch more fluid -- 81% humidity).

CAFFEINE: SiS caffeine gel 30-45 min pre-start for the 2-4 AM low. Don't overdo.

DRIVE/ARRIVE: race ~45 min from home. Work backward from est. start: ~45 min drive + arrive 30-45 min early + warm-up = leave ~1.5 hr before your window (e.g. 2 AM start -> out the door ~12:30 AM).

WARM-UP: dynamic warm-up + a few strides at the exchange (cold/stiff at 2 AM).

PACING/HR: dark + damp + 59% unpaved -> **conservative opening third** til eyes/footing adapt. Then **<145 / <148 (climb mi 7-8, let it spike, settle on descent) / last third let it rip** (cool air = real upside).

GEAR CHECKLIST

[] Headlamp charged (test 2.5+ hr burn) [] Backup light + spare batteries [] SiS gels incl caffeine gel [] Tailwind 4.5 scoops pre-mixed 1.5L [] Trail shoes [] Light layer (64° + damp) [] Phone charged (team tracking) [] Watch charged

Form +21 (fresh) | run HR cap taper | RACE HR: 1st third <145 / mid <148 / last third rip | Fuel 4.5 scoops Tailwind + 1.5L + SiS | Coach: Claude
