

Week of Aug 31 - Sep 6 | BUILD 1, Wk 1 -- RE-ENTRY

August was an offseason -- that is over, not audited. New shape: **build 3 / recover 1 / build 3**, no race on the calendar, no 5K TT. One **effort-based speed touch per week**; the repeated sessions ARE the test data. This week: get run frequency back at genuinely easy effort.

DAILY SCHEDULE

Day	Session
Mon Aug 31	DONE -- Zwift Z2 35:46 (153W NP, HR 125) + Upper Pull + Arms 25:23 + rehab. Ahead of plan.
Tue Sep 1	Easy run 3 mi. HR under 135, conversational. Deliberately slow -- first run in 9 days.
Wed Sep 2	UPPER PUSH strength (see below) + easy Z2 spin 45-60 min if you want it.
Thu Sep 3	Easy run 3.5 mi + 4-6 x 20s STRIDES. <-- the week's speed touch.
Fri Sep 4	Rest or easy spin. Nothing that needs legs.
Sat Sep 5	Ride -- distance and route by feel. Whatever the day wants.
Sun Sep 6	Easy run 4-5 mi + FULL BODY LOWER strength (see below).

THE SPEED TOUCH -- STRIDES (Thu)

Off the back of the easy 3.5. **4-6 x 20 seconds** relaxed-fast -- not a sprint, about mile-race effort with loose shoulders and quick feet. **Walk or jog until fully recovered** between each (45-90s). Neuromuscular only; it should cost you nothing. The point after 9 days off is to remind the legs how to turn over before real speed work starts next week.

BLOCK FRAME -- 7 WEEKS, NO RACE

Wk1 strides | Wk2 fartlek 6x1min | Wk3 strides | **Wk4 recovery** | Wk5 5x2min @10K effort | Wk6 20min cruise | **Wk7 repeat the Wk2 fartlek**. That last one is the trick -- same session six weeks apart, and the pace/HR comparison tells us what a TT would have, without running one. Long run 5 -> 6 -> 7 -> 8 -> 9 mi. **20-min FTP test lands in Block 2.**

STRENGTH -- 2 sessions this week (loads from your last logged session)

WED -- UPPER PUSH + ARMS

Push-up — 3 x 12
DB shoulder press — 3 x 10 @ 20 lb
DB bicep curl — 3 x 10 @ 20 lb
DB triceps extension — 3 x 10 @ 20 lb
Lateral raise — 3 x 12 @ 10 lb
*Shoulder press has sat at 20 lb a while -- try 25 on set 1 and see.
Load is yours to pick; drop it when form breaks.*

SUN -- FULL BODY LOWER

Goblet squat — 3 x 10 @ 40 lb
DB Romanian deadlift — 3 x 10 @ 40 lb
Box step-up — 3 x 10 each side @ 20 lb (LEAD LEFT)
Split squat — 2 x 8 each side, load by feel
DB bench press — 3 x 10 @ 30 lb
Step-ups and split squats have dropped out of the log -- they are the left-quad work. Put them back.

REHAB (DAILY) + NUTRITION / WATCH LIST

REHAB -- every day, pick what fits:

TKEs — 3 x 15 each leg, black band
Iso wrist hold (left) — 3 x 30s @ 10 lb
Spanish squat — 3 x 30s
Hammer curl — 3 x 12 @ 15 lb, slow eccentric, left bias
Elbow just went 10 -> 15 lb with no flare, 8 months out. That arc is working. Rule holds: pain under 4/10 while loading is fine; higher, or lingering past 24h, back off.

NUTRITION: deficit ~300-400/day, protein **150 g** (whey scoop is the lever).

WATCH LIST:

- **Calves and achilles.** 9 days off running at 56 -- easy means easy. This is the one thing that could cost weeks.
- **BP -- 2 readings.** Zero in four weeks; get the cadence back.
- **Bedtime.** Drifted past midnight most of August. Cheapest recovery lever there is.
- **Weight re-anchors** at mid-week check-in (MFP is the only source).

FTP ~215W working (ramp 229 / intervals 214, Aug 5) | Bike Z2 120-161W, HR 120-134 | Bike LTHR ~150 | Run easy HR <135 (~10:50-11:10/mi recent) | Fitness CTL 45 | Coach: Claude
