Sat Jun 20	Strength Full Body Lower (~35 min) + optional easy Z2 ride 60 min. Rehab.
Sun Jun 21	LONG TRAIL RUN -- 6 mi conversational pace, HR <145. Pick a trail w/ some elevation.

SUN LONG TRAIL RUN -- 6 mi (BR100 build week 1 anchor)

6 mi at conversational pace, HR <145. Modest step from last Sun's 5-mi shakeout. **Pick a trail with some elevation** -- BR100 Leg 8 has its big climb at mile 7-8, so we re-introduce climbing fatigue gradually. Trail running ≠ road running -- uneven footing, slower turnover, eccentric quad loading on descents. Don't compare pace. Fueling: 1 gel mid-run OR a Tailwind bottle is plenty.

STRENGTH -- 3 sessions (Wed Push / Fri Pull / Sat Full Body)

REHAB DAILY (continuing 7+ week streak)

TKEs (Terminal Knee Extensions) -- 3x15 each leg with band. Knee to full lockout, 1s hold, slow return. VMO targeting.	Isometric wrist hold (left elbow) -- 10 lb DB, arm extended, elbow straight, 3x30s. Palm UP if inside elbow / DOWN if outside.

NUTRITION -- WEIGHT LOSS MODE

Daily targets: Cal: 2,000-2,300 most days / 2,400-2,600 long run/ride days Protein 150g/day -- whey scoop daily is the lever Net deficit target: ~250-400 cal/day Trend goal: 0.5-0.75 lb/week -- PACE is the success metric Dietary sodium: tracked, not a decision input (Roger's call)	Weight loss context: Destination: 165 lb (currently ~188). No hard deadline. At 0.5-0.75 lb/wk: end-2026 likely lands 172-178; full goal extends into 2027 -- that's fine. Sustainable rate > urgency. Anything faster costs training quality. Lighter body = sub-2:00 half + next FBG ~30 min faster. No race-week refeeds for a while -- BR100 doesn't qualify (not an A race).
